

Rsam Content Libraries

Reliable content is critical to a successful Governance, Risk and Compliance (GRC) initiative. Without it, the resulting assessment data and analysis can be misinterpreted and lead to inaccuracies.

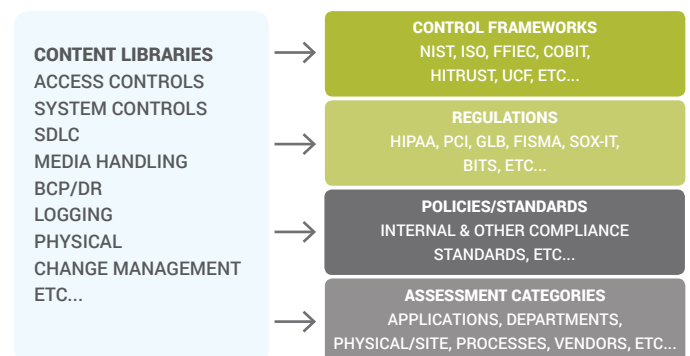

Organize content intelligently and easily with Rsam's GRC platform. Our content library is comprehensive, simple to use, and automated. Our time-tested and trusted templates, based on industry standards, are always growing to keep up with the ever-evolving GRC environment.

Rsam's platform is pre-populated with thousands of controls that are ready to use out-of-the-box. Libraries are organized and grouped into relevant categories, assigned to appropriate areas of assessment, and cross-mapped to multiple regulations and standards. You can also add customized surveys, standards and compliance templates. Use Rsam as a central repository for all assessments within the organization.

- Optimize the way you ask questions
- Utilize place holders for weights, links and other related items
- Dynamically map content to one or many areas of compliance or domains
- Add or modify content on-the-fly
- Import content from a variety of data sources

Features

- **Comprehensive library of controls** – Access thousands of controls based on various standards. Each control has default weights, controls levels and other related data.
- **Cross-mapped content** – Each Rsam control is cross-mapped to standards, regulations and compliance areas. View or modify mappings with ease. You can also cross-map controls to your own custom compliance domains.
- **Import in-house or create your own controls** – Easily import existing questionnaires or surveys from Excel, delimited files or from any ODBC-compliant data source such as Access, SQL server etc.
- **Build your own Assessment** – Using a simple administrative web interface, you can create a custom assessment in minutes. Set-up cascading logic and auto-answers.
- **Intelligent & automated risk- control analysis** – Rsam content architecture is designed to keep data gathering simple for the end user, but allows for intelligent & automated analysis. Minimum control requirements can be set when certain situations exist, thereby allowing for compliance-specific analysis.

About Rsam

Rsam helps organizations meet their security, risk and compliance goals quickly, even as requirements are always changing. Our enterprise software platform uses a relational architecture and captures data in a single, centralized repository. Unlike other systems, we don't hard-wire dependencies based on requirements that were probably outdated before implementation began. Instead, the Rsam platform is built to adapt and puts the user in control. Learn more at rsam.com.
