Why Rsam?

Built for Change

Most GRC platforms are outdated before they're fully implemented. That's because vendors usually ask for all requirements upfront and hardwire dependencies during the initial design. Not Rsam. Our platform can adapt to any change you throw its way. Your modules all draw from a single, centralized repository built in a relational architecture. That means you can make changes without fear of breaking dependencies.

Demonstrate Value Quickly

Deploy an out-of-the-box, turnkey baseline configuration that addresses your most urgent use case within 30 days and iterate from there. With Rsam, you can also easily customize the baseline to meet your own unique needs. Iterate each step of the way until you reach 100% of your requirements. This keeps your implementation manageable and moving forward.

Puts Control in Your Hands

Your GRC program is unique to your organization – and Rsam thinks it should stay that way. We give you control over what modules you want to implement and in what order. There is no custom coding or expensive rework if you change your mind. Rsam's relational architecture leverages a central database so you can build new use cases at your own speed. You save time, resources and money.

Rsam Solutions

GRC

Rsam can help you transform GRC from ugly to elegant in 30 days. We keep it simple. Start with your highest priority modules. Add on as you go with a spectrum of modules to meet the most demanding requirements.

Security Operations

Whether you need to build an integrated Security Incident Response Platform (SIRP) or get a better handle on your Vulnerabilities, Rsam can help. Rsam's modules facilitate proactive measures and controls to fill gaps, with comprehensive workflows that trigger fast response.

VRM

Chances are you're managing more vendors than ever. Rsam gives you everything you need for solid, reliable vendor risk analysis and management. Intuitive workflows guide you through assessment, issue tracking, notification, remediation and reporting. And our relational data approach allows you to "ask once; evaluate against many."

Our Platform – Your Use Case

Organizations of all sizes rely on the Rsam Platform to consolidate and automate any existing business-critical process dealing with risk, compliance, and IT/Security management. Implement prescriptive out-of-the box solutions and deploy customer solution extensions with ease. No coding or expensive rework required.

Easily deploy your solution on premise, in the cloud or a combination. And it's instantly available through mobile devices.

About Rsam

Rsam helps organizations meet their security, risk and compliance goals quickly, even as requirements are always changing. Our enterprise software platform uses a relational architecture and captures data in a single, centralized repository. Unlike other systems, we don't hard-wire dependencies based on requirements that were probably outdated before implementation began. Instead, the Rsam platform is built to adapt and puts the user in control. Learn more at rsam.com.
