

Overview

Executive leadership and board members are becoming increasingly aware of their responsibility to effectively oversee the execution of their enterprise-wide risk management processes. As part of that oversight, many organizations are looking to capture and measure leading indicators such as KPIs and KRIs to provide them with the intelligence necessary for effective risk management.

KPIs (Key Performance Indicators) provide insights about risk events that have already affected the organization; KRIs (Key Risk Indicators) enable businesses to monitor potential future shifts in risk conditions.

Key Benefits

- Create and manage a library of indicators for your organization
- Facilitate automated and/or manual data collection for each indicator
- Set thresholds for indicators, and alert key individuals when indicators fail or deviate from the norm
- Track and manage adherence and deviations from standards over time
- Leverage drag-and-drop capability to create charts, including heatmaps
- Communicate business value to executives and stakeholders using role-based views
- Link indicators to risk, remediation plans, exceptions, and other record categories in Rsam

The Rsam Advantage

Beyond KPIs and KPIs, leading organizations are also placing great emphasis on the need to capture objectives and key results Indicators which allow for a more robust and dynamic method of providing intelligence on potential or future risks. Capturing Indicators provides insights into the creation of objectives, and enables organizations to measure whether they meeting their defined business goals.

How It Works

With Rsam Indicators and Metrics module, organization can:

- Define and manage the fully lifecycle of metrics
- Automate the process to collect and measure these metrics over time
- Reports against defined objectives and other attributes

Rsam's unique metrics generator capability automatically records relevant metric data on a recurring schedule and generated automatically by referencing the data already collected within Rsam, or via a workflow-enabled process.

Any deviations from the expected results are subject to criteria-based alerts and escalations, so appropriate stake-holders can make informed decisions on a timely basis. Results can be easily harvested and reported, leveraging Rsam's drag-and-drop charting capabilities to create a variety of charts and heatmaps. All such dashboards can be placed in role-based views providing key stakeholders the information they need to stay informed and have appropriate oversight of their risk and compliance management programs.
