

Organizations face a broad spectrum of risk that can impact performance and daily operations. Getting everyone on the same page is essential to managing the increasing scope of risks and scrutiny from internal and external stakeholders.

Enterprise-Wide Visibility

Rsam's Enterprise Risk Management (ERM) platform delivers a complete view of risks and related dependencies. You can integrate survey-based risk assessments with findings-based risk management to define and implement your preferred risk management program and methodology.

Central Respository

Rsam provides a centralized repository for all risk, control and remediation activities, which highlights the interdependencies between them. You can establish a common risk taxonomy understood by all functional areas.

Rsam's native risk scoring system can be configured to any standard or custom ERM scoring or methodology. And you can easily create or import either COSO-supported controls or ERM frameworks.

Features

Rsam's ERM platform enables you to:

- Share, update, and aggregate information dynamically across the enterprise
- Mine and correlate data, calculate risks and easily manage workflows
- Gain greater risk visibility with actionable roll-up & drill-down reports
- Document & manage remediation plans once gaps are identified
- Maintain a continuous view of outstanding risks and "if, how, and when" they will be addressed

About Rsam

Rsam helps organizations meet their security, risk and compliance goals quickly, even as requirements are always changing. Our enterprise software platform uses a relational architecture and captures data in a single, centralized repository. Unlike other systems, we don't hard-wire dependencies based on requirements that were probably outdated before implementation began. Instead, the Rsam platform is built to adapt and puts the user in control. Learn more at rsam.com.
