

Organizations face risks from a variety of incidents, not just cyber security, which can threaten their operations. A quick and effective response can minimize adverse effects and ensure compliance with internal and external mandates. Manual or homegrown solutions typically can't be scaled to meet growing and changing requirements.

Rsam for Incident Management

Rsam's Incident Management module automates identification, planning and response processes. Use it to initiate and manage plans, actions, and allocate appropriate resources to resolve incidents in a timely manner. You have the tools to provide upper management with fast, accurate views of the real-time situation, which can impact individual business concerns.

Features

- Track people, process and response status
- Automate approval process
- Provide accurate and current data through reports and dashboards

Benefits

- Increase visibility and accountability
- Speed time to resolution
- Minimize operational impact
- Enable audit-ready trail of all related activities

Rsam INCIDENT MANAGEMENT PROCESS

About Rsam

Rsam helps organizations meet their security, risk and compliance goals quickly, even as requirements are always changing. Our enterprise software platform uses a relational architecture and captures data in a single, centralized repository. Unlike other systems, we don't hard-wire dependencies based on requirements that were probably outdated before implementation began. Instead, the Rsam platform is built to adapt and puts the user in control. Learn more at rsam.com.
